

Nour Badr

SENIOR FRONT-END ENGINEER

Cairo, Egypt / Nourbadr4646@gmail.com / +20 1159347686 / noureldenn.github.io/personal-portfolio / linkedin.com/in/nour-badr-201794155 / github.com/noureldenn

SUMMARY

Front-end engineer with six years building production web applications in React, Next.js, and TypeScript, now setting the front-end direction across four products at Craft Crew and working on the backend in Nest.js. The work has moved deliberately between sectors — gaming and influencer marketing, social commerce, e-commerce, healthcare, real estate, education technology, retail SaaS, and now radiology and carbon accounting — because understanding the person who will use the software matters as much as building it. Currently studying AI and machine learning independently.

SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML, CSS · also Angular
Styling / UI	Tailwind CSS, shadcn/ui, Material UI, Ant Design, Chakra UI, Bootstrap, SASS
Forms / Docs	Formik, Storybook
State	Redux Toolkit, Redux Thunk, React Query, MobX
Backend	Node.js, Nest.js, Express, Python, REST, GraphQL
Testing / Tooling	Jest, Git, Husky, Figma

EXPERIENCE

Craft Crew — Senior Front-End Engineer Jan 2026 — Present

- Own every front-end decision across four products, and work on the backend in Nest.js. Chose Next.js and TypeScript on the front end and Nest.js on the back for one reason: a single language across the system lets a small team move between products without changing how it thinks.
- Put the standards into the tooling rather than into documents nobody reads — commit-stage checks through Husky, and one shared approach to forms and validation so every product behaves the same way.
- Review the work of less-experienced developers and allocate the intern team's tasks, explaining why something breaks rather than quietly correcting it.
- Building an internal tooling set that turns a Figma link into front-end code, so repeated design translation across four products becomes review rather than retyping. In trial, not yet team-adopted.
- Stack:** Next.js, TypeScript, Nest.js, Tailwind, Husky.

PRODUCTS	Radiology platform handling real medical images for Egyptian imaging centres, with an AI stage ahead · Operational systems for those imaging centres · Education and courses platform · Carbon-accounting platform for a client in Morocco
----------	--

Vertex Era — Freelance Front-End Developer Dec 2025 — Feb 2026

- Built the front end of Tag Pro, Vertex Era's UAE SaaS platform for monitoring and verifying radio and broadcast advertising: it listens to campaigns as they air, checks that the spots a client paid for actually ran, and reports back where and when they did.
- Built the monitoring dashboard around live status — channel widgets and data visualisations that update while a broadcast is still running, so an operator sees a problem during the campaign rather than in a report afterwards.
- Made the product work on a phone as well as it does at a desk, because the people checking a campaign are usually not sitting at one.
- Stack:** React, Next.js, TypeScript, Tailwind.

PRODUCT	Tag Pro — tagpro.ae
---------	---

Neoxero — Front End Developer Nov 2024 — Dec 2025

- Customized React applications and built themes for merchants on Zid, the largest e-commerce platform in Saudi Arabia — translating each merchant's brand into the shared app shell without forking the core code.
- Built a token-driven theme layer on top of Tailwind so a merchant got their palette without anyone writing new CSS, and rebuilt the component library on shadcn/ui, replacing duplicated button and form variants with one set every store shares.
- Moved cart and session state onto Redux Toolkit, replacing a mix of Context and ad-hoc reducers that had been causing race conditions on add-to-cart.
- Stack:** React, Next.js, TypeScript, Tailwind, shadcn/ui, Redux Toolkit.

LIBRARY	Zid Core Library
MERCHANT APPS	Oilnz · Sattec · Lighting Address · Almutlaq Furnitures · Silverback · Ejaz Homes
ZID THEMES	Asante · Bare · Cafee · El-Der3ya · Elhelal · El-Kadseya · Elsaif · Elnasr · Elarat · Furns · Insel · Maden · Marabina · Mayar · Anno-Cae · Onepage Schools · Snoor · Truth

Atech — Front End Developer (Zoho)

Jan 2024 — Nov 2024

- Built a platform for a training centre that joined its point-of-sale, its social channels, and its CRM into one system, so enrolments and payments stopped being reconciled by hand across separate tools.
- Automated the centre's social campaigns so an enquiry arrived in the CRM already attached to the campaign that produced it, and staff stopped copying leads between platforms.
- Rebuilt course registration and payment as a single flow, so a student could find a course and pay for it without leaving the site or waiting for a place to be confirmed by phone.

Perfect Touch Information Technology — Front End Developer

Sep 2023 — Dec 2023

- Built a hospital dashboard for scheduling staff and clinics, designed around how the scheduling team already worked rather than around the shape of the database behind it.
- Built a real-estate client-management system with reporting that let an agent answer questions about their own pipeline directly, instead of asking someone else for an export.
- **Stack:** React, TypeScript, Bootstrap, Formik, Axios.

Smartivemedia — Front End Developer

May 2022 — Dec 2022

- Built both sides of Dookan, an e-commerce platform: the merchant dashboard where sellers manage catalogue and orders, and the customer storefront they sell through.
- Reworked checkout and search filtering so a customer could narrow a large catalogue down to the thing they actually wanted and finish the purchase in the same flow, rather than abandoning it midway.
- **Stack:** React, Next.js, TypeScript, Material UI, Ant Design, Tailwind, React Query, SASS.

Alefsoftware — Front End Developer

Oct 2021 — May 2022

- Built Productive Families, a platform and delivery dashboard letting home producers sell what they make online and follow an order through to delivery — for sellers who had been running the whole business through messaging apps.
- Delivered the company's own site in Next.js, so prospective clients could see what the company built before speaking to anyone in it.
- **Stack:** React, Next.js, JavaScript, SASS.

Syft.la — Front End Developer

Sep 2020 — Oct 2021

- Built Syft.gg, an influencer marketplace made by gamers for gamers and the brands trying to reach them, through two versions of the product and its marketing site.
- Built App.syft.la, where influencers found brand campaigns, joined them, and tracked what they had agreed to deliver — the side of the marketplace that made the listings worth browsing.
- **Stack:** React, Next.js, TypeScript, Chakra UI, Tailwind, GraphQL, Storybook, MobX.
